

The same way a car needs its own carebook, everybody should have its own medical documents folder. A lot of situations can drive to an emergency department : accidents or diseases. Anyway, doctors need to know about the medical history of the patient because this information gives the doctor the right way to provide good and rapid treatments. Sometimes, it can be vital: for example, administration of a drug to which the patient has an allergy can kill him in few seconds ! It's also very important to know about actual drug treatment to avoid negative interactions with new ones.

Generally, even if conscious, patients are not able to report all their history and it takes more than 20 to 30 minutes to get it ... if patient and doctor speak the same language ...

So it's quite important to have a "medical memory" 24h/24, 365 days a year, in case of.

This is the purpose of LIFE BADGE.

LIFE BADGE is a credit-card sized card, without magnetic tape or chip, with only a 23 digits number that gives access to a personal web site build in medical record form. The patient is the only master of the data included in his web site (a personal password, created by owner himself, gives opportunity to add/remove/change data). Of course, he can get help from his general practitioner or cardiologist or anybody else who cares of him.

In case of unconsciousness, the emergency physicians have access to the medical web site of the patient because the 23 digits number is enough to read medical information (the password is mandatory for management of the data only).

LIFE BADGE is 100% deontological and ethic, and guaranties private life of the owner of web site. This is a voluntary procedure without any obligation.

An automatic translation in 15 different languages give a worldwide access.

LIFE BADGE also permits to upload pictures (XRay, scanned documents such as ECG or laboratory results) but also excel/doc/pdf/zip etc. files.

LIFE BADGE can also receive agreed mails in a medibox so the patient can, if he wants to, receive informations that way. He will then decide to destroy/keep or integrate to LIFE BADGE, these informations.

Any Internet connexion (Mac or PC) opens to LIFE BADGE web sites.

An iPhone or iPod touch or any other portable WiFi or GPRS/3G/Edge/UMTS device is enough !

All people need LIFE BADGE ... in case of ...

For the first time, a simple card can save your life !
